Catalogue

Since 1971, PLKB has been ahead of its time, innovating kites and developing gear aimed at harnessing the power of the wind in the best way possible. Innovator of the first kite buggy, father of depower foils and market leader in power kites: PLKB never missed the opportunity to invite anyone interested in wind and power in this world.

These shared passions are reflected in the optimal products for every discipline, that we've been constantly developing and creating kites using latest technology and aiming to push the sport to new levels, and riders to the top of podiums.

In this catalogue you can find our newest creations!

SWELL V4

WAVE | FREERIDE | SCHOOL

SIZES	5	6	7	8	9	11	13	15
-------	---	---	---	---	---	----	----	----

DNA

COLOURS

CHARACTERISTICS

- PRECISE AND RESPONSIVE
- DESIGNED FOR MAXIMUM STABILITY AND SLACK LINE DRIFT, EVEN WHEN DEPOWERED
- EXCEPTIONAL WIND RANGE
- LIGHT AND RESPONSIVE BAR PRESSURE

ESCAPE V8

FREESTYLE | FREERIDE

SIZES	6	7	8	9	10	11	13	15
-------	---	---	---	---	----	----	----	----

DNA

COLOURS

CHARACTERISTICS

- + INTUITIVE HANDLING & KITE FEEDBACK
- + DIRECT AND REPSONSIVE STEERING
- + BIG WIND RANGE
- + FREESTYLE ORIENTED PERFORMANCE

HOOK V2

PERFORMANCE | FREERIDE | BIG AIR

SIZES	4	6	8	10	12	14	16
-------	---	---	---	----	----	----	----

COLOURS

CHARACTERISTICS

- + BOOSTING & HANGTIME
- + LIGHT-WIND & UPWIND PERFORMANCE
- + GREAT HANDLING AND KITE FEEDBACK
- + EXCEPTIONAL WIND RANGE

SYNERGY

LIGHTWIND | FOIL

SIZES	6	8	10	12
WEIGHT (kg)	1.796	2.065	2.366	2.736

DNA

COLOURS 

CHARACTERISTICS

- + EXCELLENT LIGHT WIND PERFORMANCE
- + DIRECT FEEL AND KITE FEEDBACK
- + CLEAN SHAPE AND DESIGN
- + LIGHT AND DIRECT TURNING

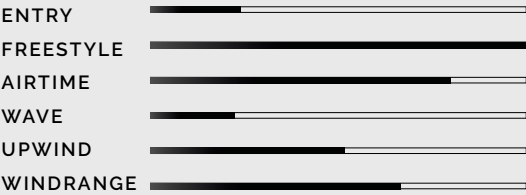

RAW

FREESTYLE | WAKESTYLE

SIZES	7	9	11	13
-------	---	---	----	----

DNA

COLOURS

CHARACTERISTICS

- + HARDCORE 5 LINE C SHAPE
- + POWERFULL POP AND GREAT SLACK DURING TRICKS
- + DIRECT FEEL AND KITE FEEDBACK
- + EXPLOSIVE BOOST

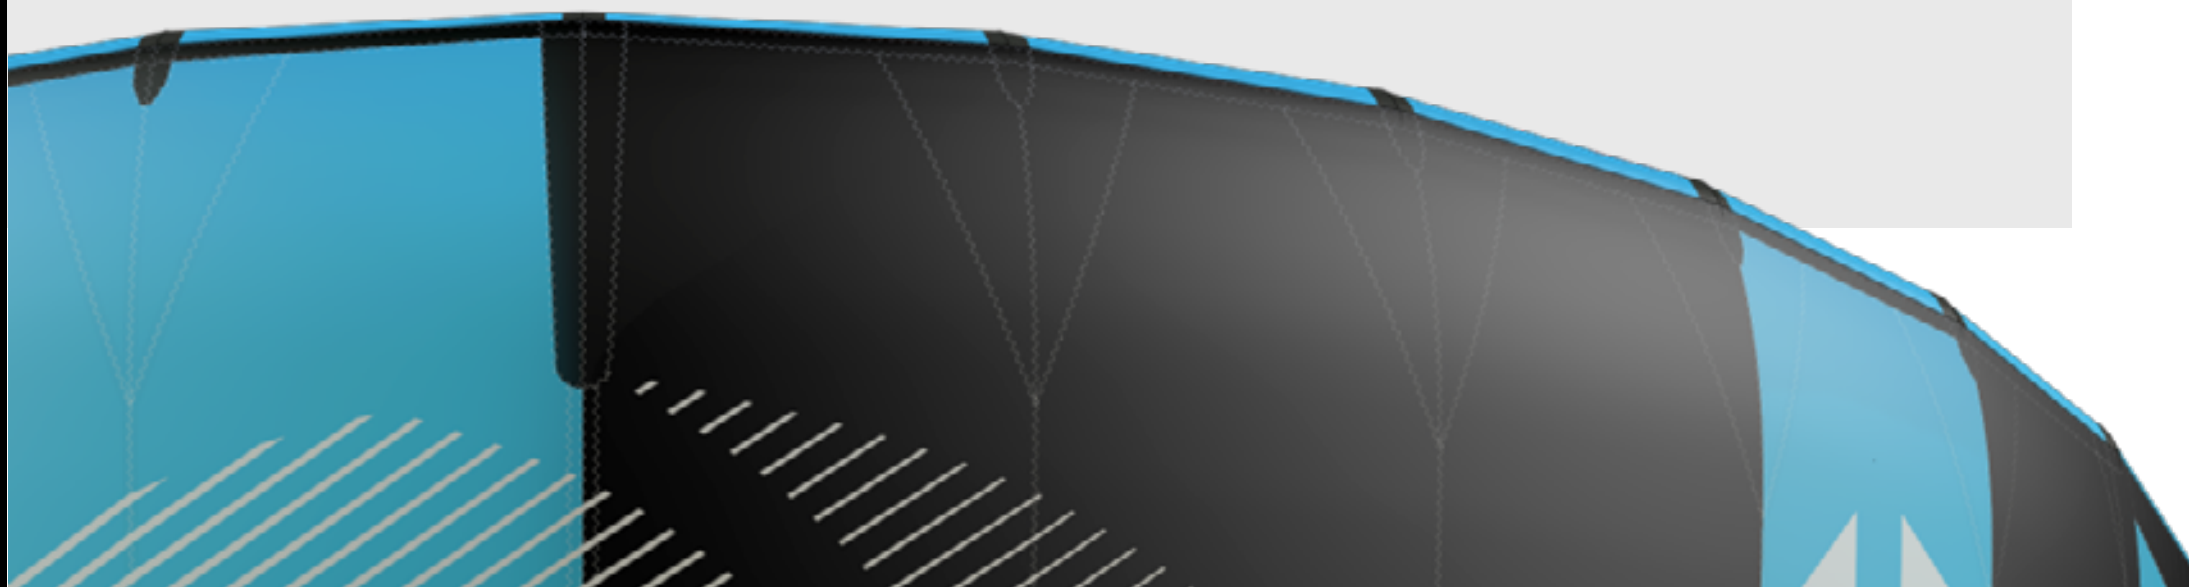

FEEL THE DIFFERENCE

LEARN ABOUT THE TECHNIQUE IN OUR TUBE KITES

If you look closely at the canopy attached to the leading edge, you will see multiple triangular shaped panels. These multiple triangular shaped panels called TriFlow, create a smooth and clean transition between leading edge and canopy. By using the TriFlow, the canopy attached to the leading edge is now able to curve both sideways over the leading edge and from the leading edge to the trailing edge.

This creates extremely smooth surface and airflow over the canopy, resulting in more stability and a better overall performance. This makes the Swell more stable when you depower the kite and totally want to focus on your ride, rather than your kite. Feel the Difference.

TRIFLOW
TECHNOLOGY

STRUT DESIGN

I STRUT DESIGN

3 STRUT DESIGN

4 STRUT DESIGN

5 STRUT DESIGN

LIGHT AND INCREDIBLY STABLE

The single strut ensures a stiff profile which is not weighed down by extra struts and is super easy to pump and pack-up. Furthermore, the one-strut keeps the canopy open for easier relaunch.

Our single strut design has an internal wing profile that connects the canopy to the strut. This profile creates better stability of the kite in light wind, to eliminate front stalling, even when yyou let go of the bar.

FOR PRECISE AND RESPONSIVE HANDLING

The 3-struts unique shape gives it an amazing range, fast and easy relaunch and awesome drifting ability, even in the worst onshore conditions.

The balanced Hybrid/SLE shape is designed to be stable and offers the precise and responsive handling that both wave chargers and free riders demand. Its lightweight 3-Strut frame offers maximum stability and slack line drift when you want to focus on surfing the wave. The shape allows for a super speedy water relaunch which is a must when riding more serious sized surf or when you're dialling in that new trick.

CLEAN MIDDLE SECTOR TO BOOST BIGGER

By leaving the kite's large middle section free from struts, the distinctive 4 strut frame is provided with even more grunt and boost that gives you all the power you need to throw even the most radical moves.

FOR THE MOST DIRECT FEEL

The 5 strut connection is built for massive hang-time, speed and upwind capabilities. Also, the high Aspect Ratio increases the aerodynamics of the wing, and helps your landings by gently placing you on the water. Buttery landings are a must if you're starting to really push your riding.

FOILS

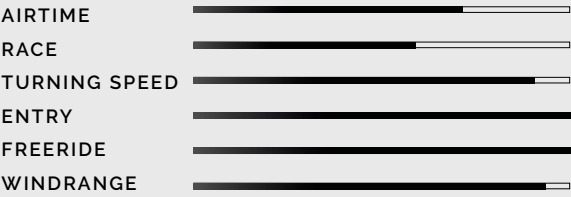

NOVA

LIGHTWIND | FOIL

SIZES ST	4	6	8	10	12
SIZES UL			8	10	12

DNA

COLOURS

UL

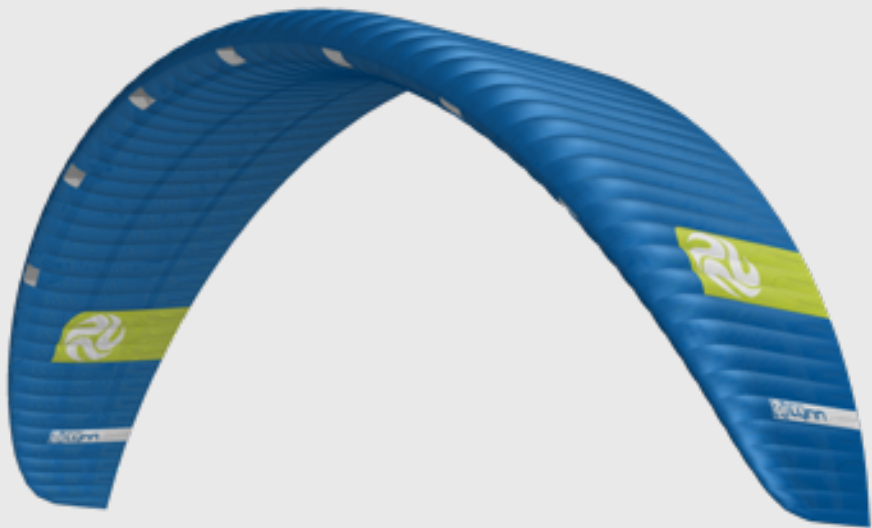

CHARACTERISTICS

- + COMFORTABLE BAR PRESSURE, LOW SIDEWAYS PULL
- + HIGHLY STABLE, RIGID WING
- + FOIL SPECIFIC PERFORMANCE, EASE OF A LEI
- + FILLS FAST, RETAINS INTERNAL PRESSURE

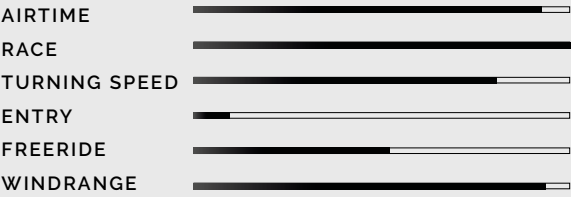

AERO V2

RACE | FOIL

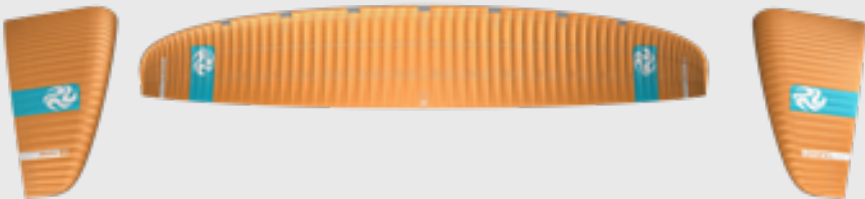

SIZES ST	8	10	12	14	15	16	18	
SIZES UL	8	10	12	14	15	16	18	21

DNA

COLOURS

CHARACTERISTICS

- + LARGE WINDRANGE
- + RAZORSHARP UPWIND DRIVE
- + DIMENSIONALLY STABLE
- + RACING TO THE PODIUM

SHAPE MEMORY STRUCTURE

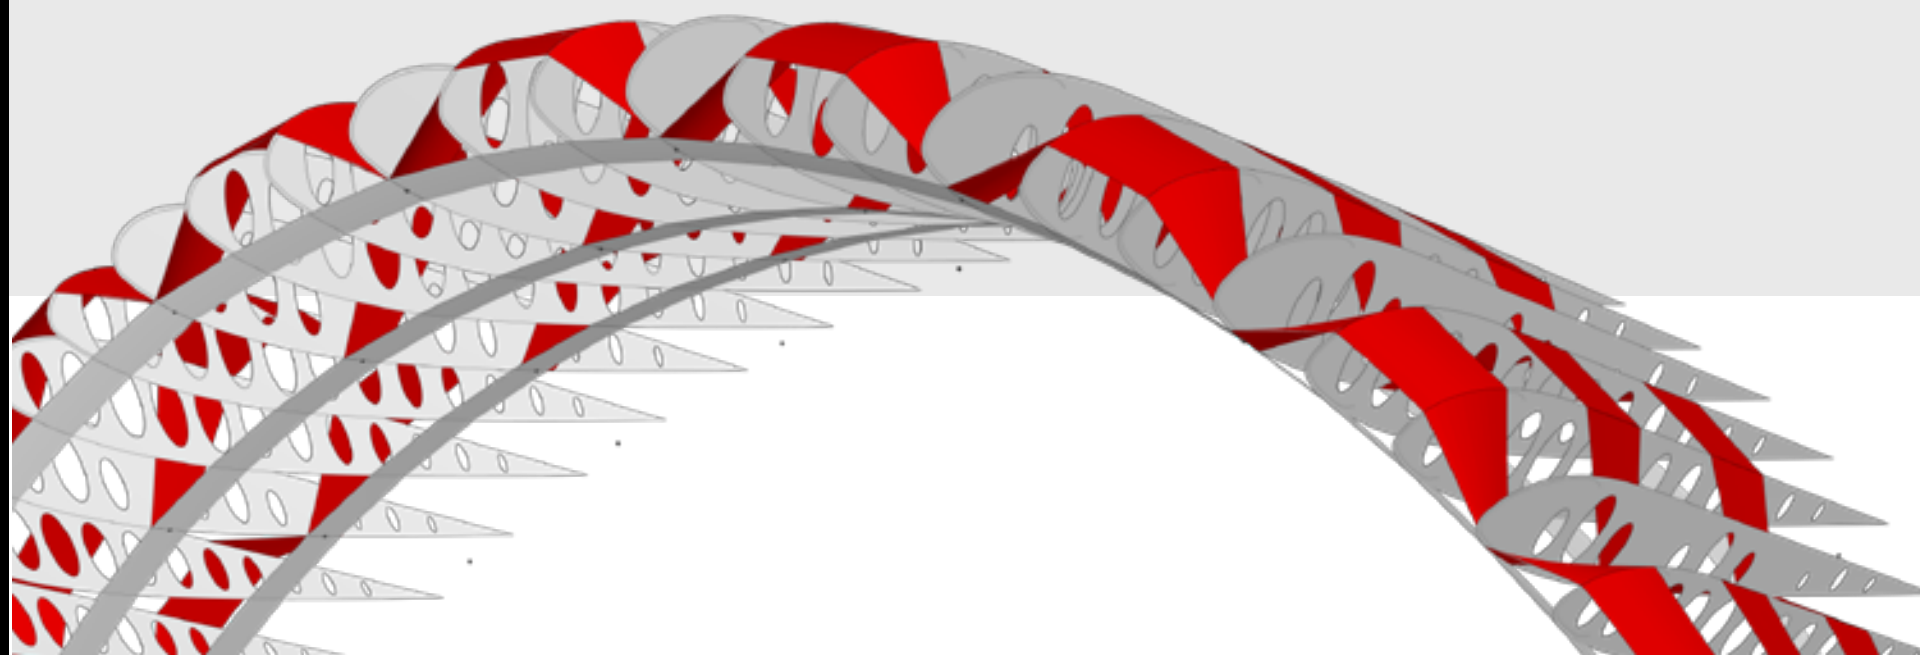

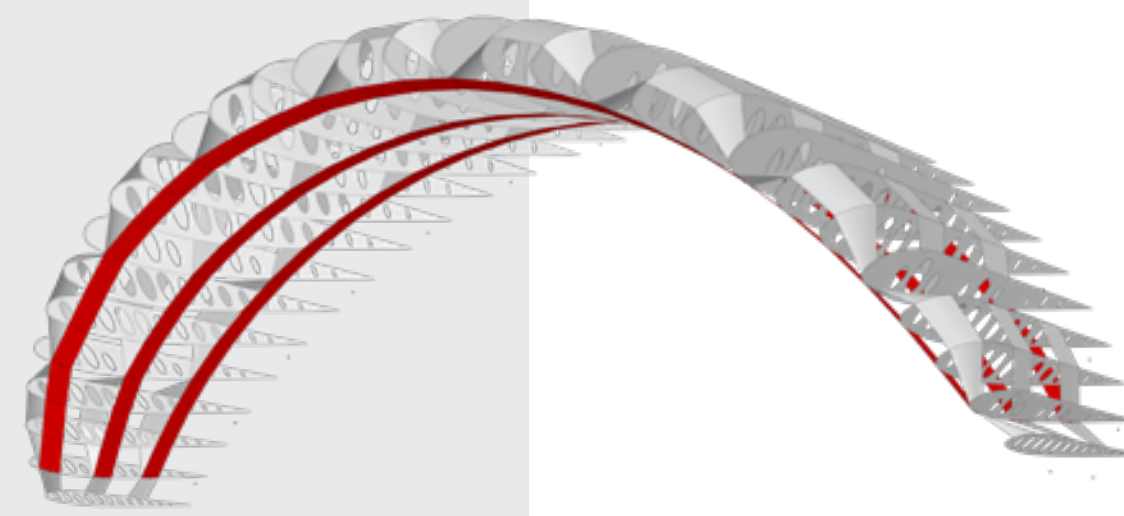

LEARN ABOUT THE TECHNIQUE IN OUR FOIL KITES

Tension Straps:

The inside of the kite is designed especially to maximize dimensional stability as well as reduced need for bridle points. The tension straps running along the bottom skin are a technical detail borrowed from the Twinskin/Arc design, and ensures proper bulging of the bottom skin while keeping the tension in check.

Bridge Technology:

The clever D and H Ribs allow for evenly spaced out bridle points and create a very rigid frame.
